

Policy design and human accountability

Aldentity helps an organisation decide what to change, why it matters, who is accountable and how to know whether it is working. Work can cover strategy, governance, operating models, responsible AI, risk, privacy, cyber security and transformation planning. Advice is shaped to the organisation's size, maturity and regulatory context.

SME / START FOCUSED

Prioritise a manageable first use case, identify owners and risks, agree minimum viable controls and create a staged plan that fits available people and budget.

ENTERPRISE / EXTEND WITH CONTROL

Align board and executive oversight with business-unit delivery. Define delegated authority, control ownership, integration principles, exception routes and reporting across a complex operating model.

COMPOSABLE CAPABILITIES

Typical modules include discovery and readiness; data and AI governance; operating-model and decision-rights design; policy-to-control mapping; risk and impact assessment; supplier and architecture review; and a sequenced implementation roadmap. Aldentity can remain an independent adviser while the customer selects its own delivery partners and technology.

A PRACTICAL FIRST MILESTONE

Start with a bounded scope, named owner and evidence of value.

From authenticated intent to controlled action and evidence.

Probabilistic systems may interpret or recommend. They do not grant themselves authority. The Orchestrator coordinates context and assessments; deterministic policy decides, and enforcement happens at the action boundary.

THIS PRODUCT'S ORCHESTRATOR INTERFACE

Aldentity connects people and organisational intent to the Counterpoise Orchestrator. It helps translate approved outcomes into policy scope, accountable roles, required context, risk thresholds and human-approval rules. Those definitions guide policy administration and implementation; the Orchestrator gathers evidence, while the deterministic policy decision point retains final runtime authority.

DEPLOYMENT OPTIONS

- Azure profile** — strategic enterprise route.
- Heroku profile** — lower-operational-overhead SME and controlled-exception route.
- Hosted SaaS or private/dedicated** — tenancy and service model depend on validated implementation.
- Hybrid or on-premise** — customer-specific technical assessment required; not implied as generally available.

The intended profiles retain common contracts, policy semantics, reason codes and conformance tests. Identity, residency, keys, networking, integrations and resilience are set for the customer environment.

AIDENTITY

PEOPLE INSIGHT TRANSFORMATION

Change intelligently.
Govern confidently.
