

Customer-controlled wallet and proof

Datafolio aims to make controlled portability understandable: which record is being presented, where it came from, who has authority to share it, what has changed and what evidence accompanies it. A wallet can hold a selected record or a reference and proof receipt. It should expose only the information needed for the intended purpose and recipient.

SME / START FOCUSED

Start with one practical exchange—such as a supplier credential or a validated business record—and make the source, scope and recipient clear before adding more workflows.

ENTERPRISE / EXTEND WITH CONTROL

Connect wallet presentations to enterprise identity, approved sources and Counterpoise policy. Support defined issuer, verifier and recipient roles, lifecycle events, expiry and evidence retention under customer rules.

COMPOSABLE CAPABILITIES

Potential building blocks include a customer-controlled wallet or store; source references; authority and access policy; version and change history; lineage; Verity validation receipts; selective presentation; and consent or sharing workflows. Wallet functions and support for credentials or formats must be verified against the implementation before deployment.

A PRACTICAL FIRST MILESTONE

Start with a bounded scope, named owner and evidence of value.

From authenticated intent to controlled action and evidence.

Probabilistic systems may interpret or recommend. They do not grant themselves authority. The Orchestrator coordinates context and assessments; deterministic policy decides, and enforcement happens at the action boundary.

THIS PRODUCT'S ORCHESTRATOR INTERFACE

When a governed process needs a portable record, the Orchestrator requests only the claims or references defined by policy. Datafolio can return a scoped presentation and evidence reference for assessment; Verity supplies or checks assurance evidence; the PDP decides whether the proposed action is permitted. Datafolio carries evidence—it does not grant Counterpoise execution authority or replace the authoritative source.

DEPLOYMENT OPTIONS

Azure profile — strategic enterprise route.
Heroku profile — lower-operational-overhead SME and controlled-exception route.
Hosted SaaS or private/dedicated — tenancy and service model depend on validated implementation.
Hybrid or on-premise — customer-specific technical assessment required; not implied as generally available.

The intended profiles retain common contracts, policy semantics, reason codes and conformance tests. Identity, residency, keys, networking, integrations and resilience are set for the customer environment.

DATAFOLIO

YOUR DATA. YOUR CONTROL.

The truth goes
with the data.

- PORTABLE
- VERIFIABLE
- UNDER YOUR CONTROL
- MORE POSSIBILITIES
