

Whole portfolio

The portfolio is designed to be adopted in steps. An SME can begin with an AIdentity advisory engagement or a single governed workflow, without taking on every module. A larger organisation can extend across business units, connect existing identity and data services, delegate decision rights and retain consistent evidence across environments.

THE CONNECTED PORTFOLIO

AIdentity / ADVISORY
Strategy, governance and a human interface to responsible change.

Counterpoise / GOVERNANCE PLATFORM
Orchestrates Governance, Privacy, Ethics and Security checks; deterministic policy controls action.

Verity / ASSURANCE
Records source context, validation, lineage and material-change evidence.

Datafolio / PORTABLE WALLET
Carries selected records and proof with customer-controlled sharing scope.

SME / START FOCUSED
Begin with one high-value process, clear ownership and a proportionate control set. AIdentity can help define the first scope; Counterpoise can then coordinate an agreed workflow as implementation matures.

ENTERPRISE / EXTEND WITH CONTROL
Extend by domain, team or business unit. Use common policy semantics, evidence contracts and decision records while integrating with enterprise identity, APIs, events and approved platforms.

COMPOSABLE CAPABILITIES

AIdentity shapes the operating model and human decisions. Counterpoise coordinates policy checks and runtime authority. Verity makes the checks, evidence and material changes traceable. Datafolio gives people or organisations a customer-controlled way to carry selected records and proof. Each has a distinct role; together they support a governed path from intent to action and evidence.

A PRACTICAL FIRST MILESTONE

Start with a bounded scope, named owner and evidence of value.

From authenticated intent to controlled action and evidence.

Probabilistic systems may interpret or recommend. They do not grant themselves authority. The Orchestrator coordinates context and assessments; deterministic policy decides, and enforcement happens at the action boundary.

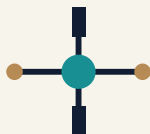

THIS PRODUCT'S ORCHESTRATOR INTERFACE

Datalogos is the portfolio steward, not another runtime decision engine. AIdentity defines business outcomes, ownership and approval boundaries; those become policy and workflow inputs for Counterpoise. Verity records the assessment and enforcement trail. Datafolio can retain selected evidence in a customer-controlled wallet or store.

DEPLOYMENT OPTIONS
Azure profile — strategic enterprise route.
Heroku profile — lower-operational-overhead SME and controlled-exception route.
Hosted SaaS or private/dedicated — tenancy and service model depend on validated implementation.
Hybrid or on-premise — customer-specific technical assessment required; not implied as generally available.

The intended profiles retain common contracts, policy semantics, reason codes and conformance tests. Identity, residency, keys, networking, integrations and resilience are set for the customer environment.

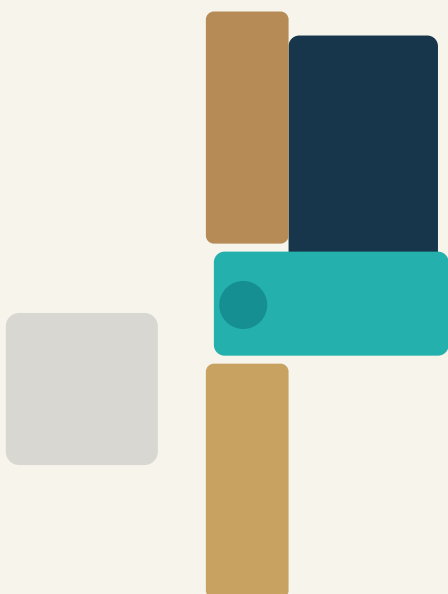

DATALOGOS

PEOPLE DATA PROGRESS

Progress with
purpose and control.

- INSIGHT
- GOVERNANCE
- OPPORTUNITY
- A BRIGHTER TOMORROW
